

# Cybersecurity Solutions

## Protect

Sure's comprehensive security portfolio aligns closely with the National Cyber Security Centre and Guernsey Financial Services Commission Cyber Security Rules. This ensures that we can help you to be more compliant with regulation and create a safer environment for your critical business data.

The compliance framework comprises five focus areas for business cyber-security. In the protect phase we define the appropriate policies and controls to ensure the integrity of critical infrastructure during and following a cyber-security event.

### Database Protection

Real time protection for databases by detecting, alerting and taking corrective action against suspicious activities, intrusions and policy violations.

### Managed Firewall

Our Managed Network Service includes a suite of network tools to provide round-the-clock management, support and security for your network appliances.

### Distributed Denial of Service (DDoS)

Sure's in-line and dedicated DDoS mitigation solution provides advanced customer security and protection by blocking and preventing malicious traffic.

### Email Protection

Our off-shore email scanning, filtering and backup, guards against cyber-threats at the perimeter and protects against data loss and disruption.

## Advisory & Design

At Sure we have a team of specialist consultants with extensive expertise in cyber-security solutions. We can help you audit your infrastructure and processes, identify risks and vulnerabilities and implement robust security systems and policies. Ask your account manager how Sure's Advisory & Design Services can help with your cyber-security needs.
