

Cybersecurity Solutions

Recover

Sure's comprehensive security portfolio aligns closely with the National Cyber Security Centre and Guernsey Financial Services Commission Cyber Security Rules. This ensures that we can help you to be more compliant with regulation and create a safer environment for your critical business data.

The compliance framework comprises five focus areas for business cyber-security. In the recover phase we ensure that the appropriate steps are taken to restore critical business systems and applications following a cyber-security event.

Digital Incident Forensics

Sure's digital forensics service thoroughly examines the incident data to gain a detailed understanding of the breach. This insight allows you quickly remediate the attack and prevent any recurrence.

Disaster Recovery as a Service

This provides near-real time replication of your virtualised computing environment, which enables immediate failover to Sure's disaster recovery cloud.

Cloud Backup

Copies of your data are kept off your premises, in a highly secure and resilient environment. Using the latest backup technology including encryption, point-in-time recovery and portal access for backup and restore management.

Virtual CISO

Flexible, fractional access to a senior security consultant can help you learn from a cyber-security incident and recommend a strategy to prevent recurrence.

Advisory & Design

At Sure we have a team of specialist consultants with extensive expertise in cyber-security solutions. We can help you audit your infrastructure and processes, identify risks and vulnerabilities and implement robust security systems and policies. Ask your account manager how Sure's Advisory & Design Services can help with your cyber-security needs.
